MedSolutions leverages nearly twenty years of experience in working with patients, providers, and payers to coordinate the right evidence-based care and services to meet each patient’s unique needs.

MedSolutions’ comprehensive Bundled Payment program will prove especially valuable in assuring successful participation, as well as the outcomes required by CMS, in the BPCI program. We have developed a model for more effectively managing post-acute care, improving outcomes, reducing readmissions, and creating continuity in care from the acute facility stay, through recovery and return home.

- Evidence-based site of care selection, length of stay management, transition coaching, and environmental needs assessment
- Complimentary, comprehensive bundled payment analytics expertise (based on data received from CMS)
- Gainshare opportunities based on savings achieved

Program features include:

- CUSTOMIZED care plans based on each patient’s clinical, environmental, and psycho-social needs
- On-site MedSolutions nurse available for high-touch care, including discharge planning and face-to-face communications with patients and caregivers, while MedSolutions’ nurse care team is available for care reminders, including call and text alerts
- Nurses act as Case Managers, providing a single plan of care and continuity across the care continuum and working as part of the intra-disciplinary team to manage progression, site of care selection, and length of stay management
- Nurses coordinate care so the patient can recover in the setting that fits their needs (home or facility), along with ensuring timely primary care provider follow up visits
- Proprietary technology database for utilizing resources and quality measures in one central location

As a $1 billion enterprise, with nearly two decades of experience exclusively focused on reducing health care costs and improving quality, MedSolutions has the capabilities and financial resources well-suited to facilitate a successful partnership with hospitals and CMS under the Bundled Payments Initiative.
